

Ben Conlin

Fort Collins, CO · benaconlin@gmail.com · linkedin.com/in/benconlin · chaoscoaching.co

Computer science graduate who turns messy real-world processes into software. Built automation, data pipelines and full-stack platforms that cut hundreds of hours of manual work and served tens of thousands of users.

EXPERIENCE

Business Law Group Colorado Springs, CO Jan 2025–Jan 2026 · Summers 2021–2024
Operations Manager · IT Manager · Tax Paralegal

- Cut a six-year tax audit from a projected 200+ attorney hours (\$80,000) to about 50 by building a transaction-extraction pipeline that produced a cross-validated ledger matching every expense to its receipt
- Eliminated hundreds of hours of manual filing a year with a Python and SQLite pipeline that ingests tens of thousands of documents: OCR, in-house Whisper transcription, rule-based routing and a trained classifier with human review
- Exposed per-attorney and per-matter margins by consolidating decades of records and tens of millions in case income into a SQL warehouse; the results drove compensation, staffing and the move to flat-rate billing
- Promoted twice in twelve months and given ownership of “Optimizing the Work,” one of the firm's five strategic pillars
- Led the design and build of a firm intranet for time tracking, PTO, intake, IT requests and benefits, saving 50+ staff hours a week

UCHealth Medical Center of the Rockies May 2026–Present
Perioperative Assistant

- Coordinate patient flow through 20+ pre- and post-op bays supporting 12 operating rooms at a Level I trauma center
- Support patients before and after anesthesia alongside nurses, anesthesia providers and surgeons in a high-acuity environment

PROJECTS

Chaos Coaching 2026–Present
Founder and developer · chaoscoaching.co

- Designed, built and deployed an AI-coached training platform that plans each athlete's week from their synced training, notes and goals
- Integrated Strava webhooks, the Claude API and Stripe; about 24,000 lines of Node, Express and SQLite with 298 automated tests, deployed with Docker
- Enforced injury-prevention rules in code so the AI's plans can't skip them, stress-tested against 13 simulated athletes

Community Gaming Wiki Personal
Founder · Python, full stack

- Founded, scaled and sold a community wiki and analytics platform serving 30,000+ users and 10,000+ peak daily visitors; owned hosting, database performance and traffic end to end

Pascal-like Compiler Michigan Tech
C · Flex · Yacc

- Built a compiler for a Pascal-like language covering lexical analysis, parsing, semantic analysis and code generation

EDUCATION

Michigan Technological University Houghton, MI Spring 2025
B.S. Computer Science · GPA 3.50

- Student Body President: represented 8,000+ students to university leadership, led 30+ representatives and grew student involvement 37%
- Drafted the university's AI policy as the only student on its AI Working Group, then trained faculty to apply it
- Managed a \$1M+ budget across 200+ student organizations

SKILLS

Programming: Python, SQL, JavaScript, Java, C
Systems: Node and Express, REST APIs and webhooks, Relational schema design, LLM and NLP pipelines, ETL and reconciliation
Tools: Git, Jira, Agile and Scrum, Excel (advanced), Epic
Spoken: French (C1)
